

BREE & Associates Inc. provides a full range of services to private and public clients within the design, engineering, construction and planning industries. Design and financial strategies undergo a continuous evaluation process that carefully considers, measures, and balances the interests of all stakeholders, ensuring that our client's project stays true to their vision and the outcomes are sustainable for the long term.

Green Building practices are an important tool for sustainable development and BREE offers consulting services associated with the Leadership in Energy and Environmental Design (LEED) Green Building Rating System. Our unique combination of practical knowledge and proactive approaches to communication and problem-solving enables us to help local officials make informed decisions concerning land use policy, ordinance amendments, economic development and environmental needs.

Serving as both team leader and professional expert, BREE works with our clients to maximize land value and enhance development potential. Program goals are established and solutions customized to expedite the planning and zoning process to achieve the most efficient and effective outcomes. Furthermore, BREE can provide comprehensive pre-construction and construction phase services as an extension of staff where we assist local officials in making informed and economically efficient decisions.

Our staff has a wealth of valuable hands-on experience gained in careers that span many years and encompass a variety of satisfied clients for multi-million dollar projects in the United States and overseas. BREE can also meet your DBE/MBE needs.
